### **INSTALLATION STEPS:**

#### **Notes:**

- This hitch is not intended for use as a weight distributing hitch.
- This hitch features a removable ball mount.
- Before towing, the hitch pin and clip **MUST** be in place, securing the ball mount to the receiver.

#### **Removing the Bumper Cover:**

1. Remove (11) fasteners that secure the bumper cover.
2. Inside the wheel well using an offset phillips screw driver remove (4) hex head fasteners, two each side.  
**Note:** If needed you may remove rear wheels to access fasteners.

3. Pull the fender flair away from the bumper cover to access the (2) hidden fasteners, one each side. Using an offset phillips screwdriver remove the hex head screw.

### INSTALLATION STEPS:

4. Using a phillips screwdriver remove (2) hex head screws from the bottom of the bumper cover, one each side. Using a 10mm socket remove (1) fastener from under the bumper cover to the right of the exhaust.

5. Using a phillips screw driver remove the final (2) fasteners securing the bumper cover, these are visible when you open the rear hatch. **Note:** You may need to support the bumper cover to prevent it from falling.

6. If your vehicle is equipped with a rear light or rear sensors, disconnect the wiring harness from the back of the bumper cover and from the rear light. Pull the fender flairs away from the vehicle and pull on each end of the bumper cover until it "pops" free. Make sure that all of the lights and sensors are disconnected and place the bumper cover in a safe place to prevent damage.

### INSTALLATION STEPS:

7. Using a flat blade screwdriver remove the wiring harness from the bumper beam or divider panel. Remove the (8) M8 bolts and bumper beam assembly from vehicle.

8. Remove the (2) plastic nuts securing the divider panel to the aluminum bumper beam. Return the plastic nuts, divider panel, and hard foam energy absorber to owner.

9. Raise the hitch into position by aligning the holes with the weldnuts. **Note:** The hitch will fit firmly between the spare tire and the rear panel.

### INSTALLATION STEPS:

10. Sandwich the hitch between the bumper beam and the rear of the car. Secure hitch using (8) existing M8 bolts removed in Step 6 and 3/8" conical toothed washers. Torque all M8 hardware to 18 ft-lbs.

11. Your car is ready for re-assembly. Reconnect the wiring harness to the bumper beam by reinstalling the push fasteners removed in Step 7. **Note:** Keep wiring harness clear of the exhaust, heat shield, and hitch receiver. Align bumper cover with the vehicle and check for interference issues. **Note:** If the receiver tube interferes with the lip in the center of the bumper cover you may need to trim it back. Be careful not to cut any piece needed to snap the light or center trim piece into position.

12. Align bumper cover and pull back on the fender flairs. Re-attach wiring harness to bumper cover. **Note:** Side markers need to be re-attached to the wire harness prior to securing bumper cover. Reinstall all (11) fasteners removed previously and snap fender flairs back into place.
